1. Introduction to Fast Checkout

Allow your guests to check out as quickly as a couple of clicks. Save customers from annoying checkout steps with innumerable fields that require unnecessary information. With Fast Checkout you can simply select what data the user should share. All fields to fill in will be displayed on one page - no reloads, authorization, wasting time and precious customers. In the back-office, you can easily access customer info.

Key features:

- Fast checkout
- All fields to fill in on one page
- Necessary information only
- Auto authorization
- Easy to access info in the back-end
- Possibility of making fields obligatory
- Enable/disable shipping and payment steps

Overall Information

Default checkout process in Prestashop seems to be overextended: the user has to authorize and complete 6 steps. Maintain strong consumer loyalty by offering a superefficient shopping experience to your guests.

Fast Checkout is a smart solution: it's now admin who decides what information the guest should provide. All the fields are displayed on one page. The user no longer wastes time creating a profile: the module creates it automatically.

The admin can assign a data type to a field. Data type limits the information the user can provide so that the typos could be excluded.

Moreover, to make checkout super-fast the module provides options to exclude Payment and Shipping steps. With just two clicks you can turn off/on these steps from the default checkout procedure, so a common customer can potentially have only the Confirm Order page to accept.

2. How to Install and Deactivate

How to Install

1. Set 777 or 0777 on the folders: '/modules/'

Important! Change all permissions back after installation.

2. Modules -> Add a module from my computer -> Choose the file (belvg_fastcheckout.zip) -> Upload this module. Choose module in section "Front Office Features" and install module

3. Preferences -> Performance -> Smarty-> Force compile -> Yes Preferences -> Performance -> Smarty-> Cache: No

How to Deactivate

Click the button Disable in Modules -> Front Office Features.

To remove the extension form the server, press Delete in Modules -> Front Office Features.

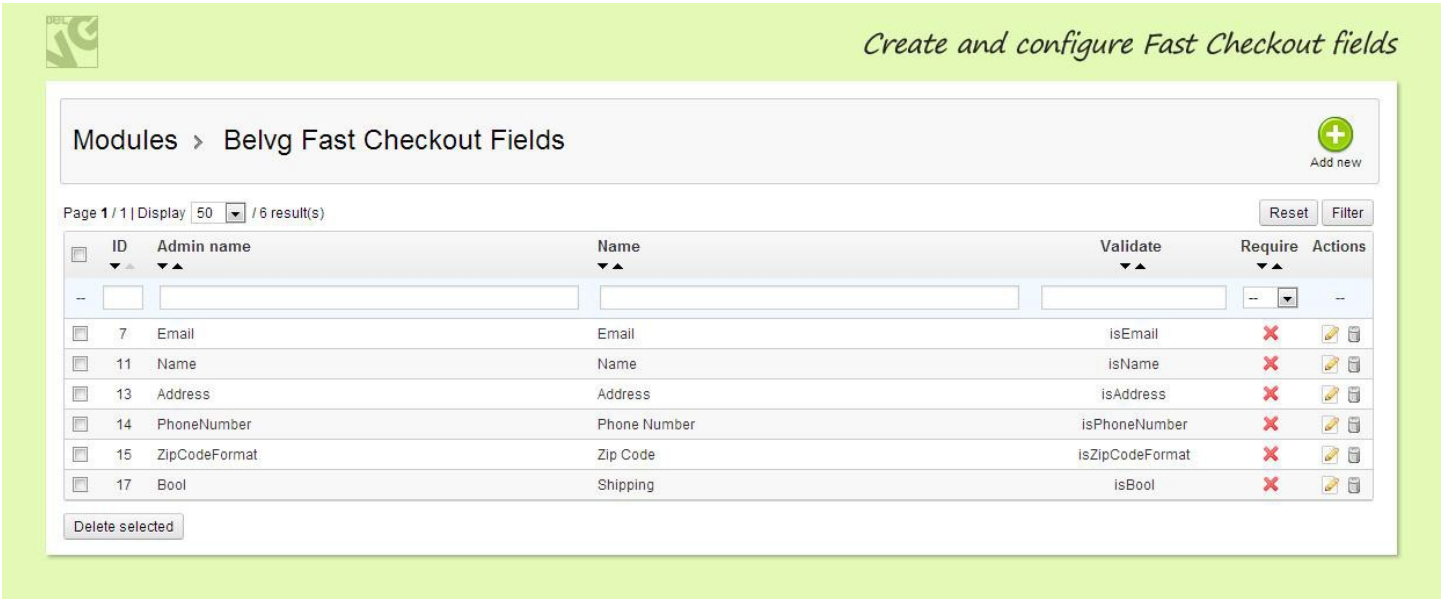
3. How to Configure

Configuring Checkout fields

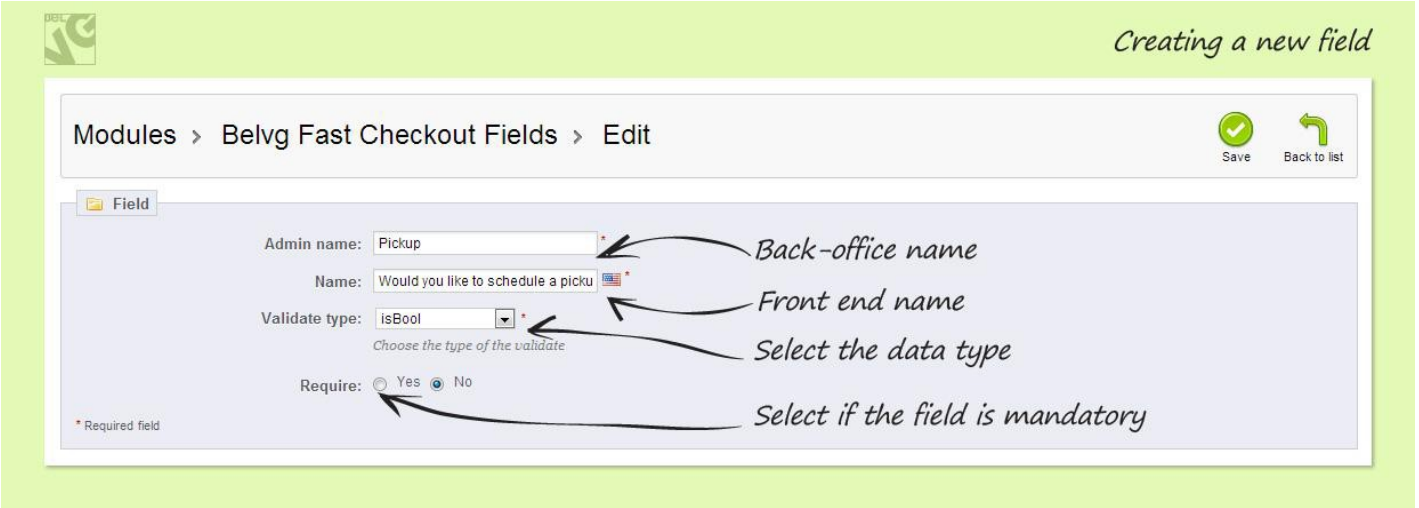
First off, let us show how you can create and configure checkout fields which you can add to or remove from the checkout pages.

Log in to the admin panel, and we will show all you may need to configure.

Navigate to Modules -> Belvg Fast Checkout Fields.



Click Add new to create a new field.



In the Admin name field enter the name of the Fast Checkout field. It will be displayed in the back office.

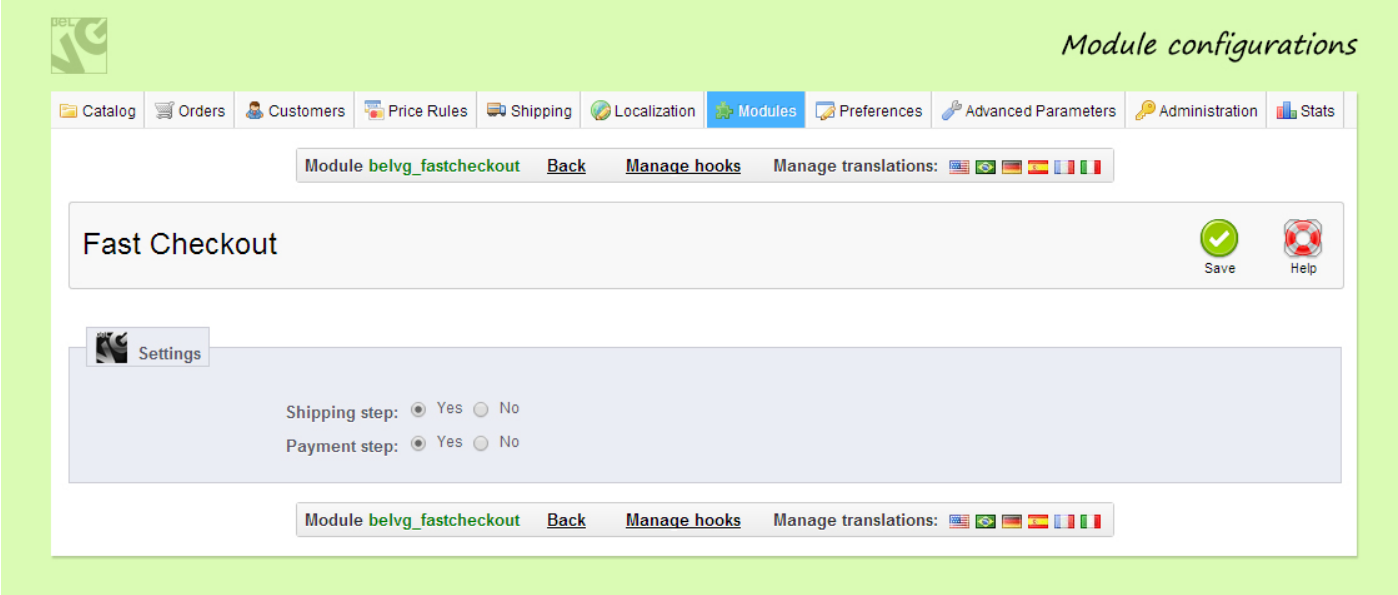
In the Name field enter the name of the Fast Checkout field. It will be displayed on the front end. In the Validate type menu select the data type the user is expected to enter while checking out. Finally, select if the field is obligatory.

Configuring Checkout Steps

To give you more control over the checkout process we have enabled the possibility to switch on/off the Shipping and Payment steps:

Go to **Modules -> Modules -> Fact Checkout –Configure**.

Here you can select either to include or exclude the Shipping and Payment steps from the checkout.



If you disable all steps a customer will be sent directly to the Confirmation page once he fills in all the required fields at Step 1. No additional Shipping and Payment steps will show up. This way you can make the checkout process really a convenient and friendly action.
