## 1. Introduction to Custom Stock Status

It's sometimes very useful to show a customer how many items are left in stock, or give any other useful info based on the Stock amount. With **Prestashop Custom Stock Status** module you can assign anything, image or text-based, to appear on your product page once a certain stock number is reached. The default use would be to inform the customer that there are almost no items left (and he has to hurry up) but you can find more creative uses for the extension as you can input anything and set any stock number as a trigger.

### Key features:

- Use various status icons which can be applied to the products in your store;
- Upload your own images and supply your statuses with any text;
- Create a custom status either for a single product only or for the whole group of items;
- Create and assign as many statuses as you want;
- Module can select a necessary status based on stock automatically;
- All product types supported.

### Overall Information

Quite often there is a need to add some type of status indication for specific products in a store. For example, when you need to indicate the number of remaining items in stock or to mark the products which soon will be available for purchase etc.

What the module does is that it allows you to create your own custom statuses which can be applied to any product. You just choose and upload the image you want to use as a status indication, add some text description and set up the rules which will define what products will be covered by that status.

In a simple manner you can also assign a specific status(es) either for the whole group of products or just for a particular item.

## 2. How to Install and Deactivate

1. Set 777 or 0777 on the folders: '/modules/'

**Important! Change all permissions back after installation.**

2. Go to **Modules** -> **Add a module from my computer** -> choose the file (.zip) -> upload this module. Choose module in section **Front Office Features** and install it.

3. Go to **Advanced Parameters** -> **Performance** -> click the **Clear Smarty Cache** button

Click the button **Disable** in **Modules** -> **Front Office Features**.

To remove the extension form the server, press **Delete** in **Modules** -> **Front Office Features**.

### 3. How to Configure

Now, after we installed the module, let's see how we can create our first status.

Log into the admin panel and go to **Modules -> Custom Stock Statuses** section.

In this section you will see all the statuses which have been previously created and are available in your admin panel.

To create a new status click the **Add New** button.

In this section you need to configure the following settings:

- **Name** – give name to your new status;
- **File** – upload an image file which will be used on the frontend for that status;
- **Quantity from/Quantity to** – set the range of available number of items, for which this specific status will be applied. Quantity means how many items of specific product are still available in your store. Setting up **from** and **to** range you can specify at which point this status will start showing up for some product. To make the status show for all products (except for manually configured), you need to enter 0 into both fields;

- **Public description** – the text which will show up next to the status icon on the frontend. Use the variable {qty} in your text description to indicate the exact number of product items available;
- **Active** – select **Yes** to enable this status.

Файл не выбран

Quantity from:

Quantity to:

Public description: 

Now we have {qty} available 🇺🇸

Available params: {qty} - will be automatically replaced with current stock quantity

Active:  Yes  No

Rules: "Quantity from" = 0 for ignoring bottom range  
 "Quantity to" = 0 for ignoring high range  
 "Quantity from" = 0 and "Quantity to" = 0 for auto applying status for all products, exclude manual assign statuses  
 Bottom range compare uses "<=" statement ("Quantity from" <= product quantity)  
 High range compare uses ">" statement ("Quantity to" > product quantity)

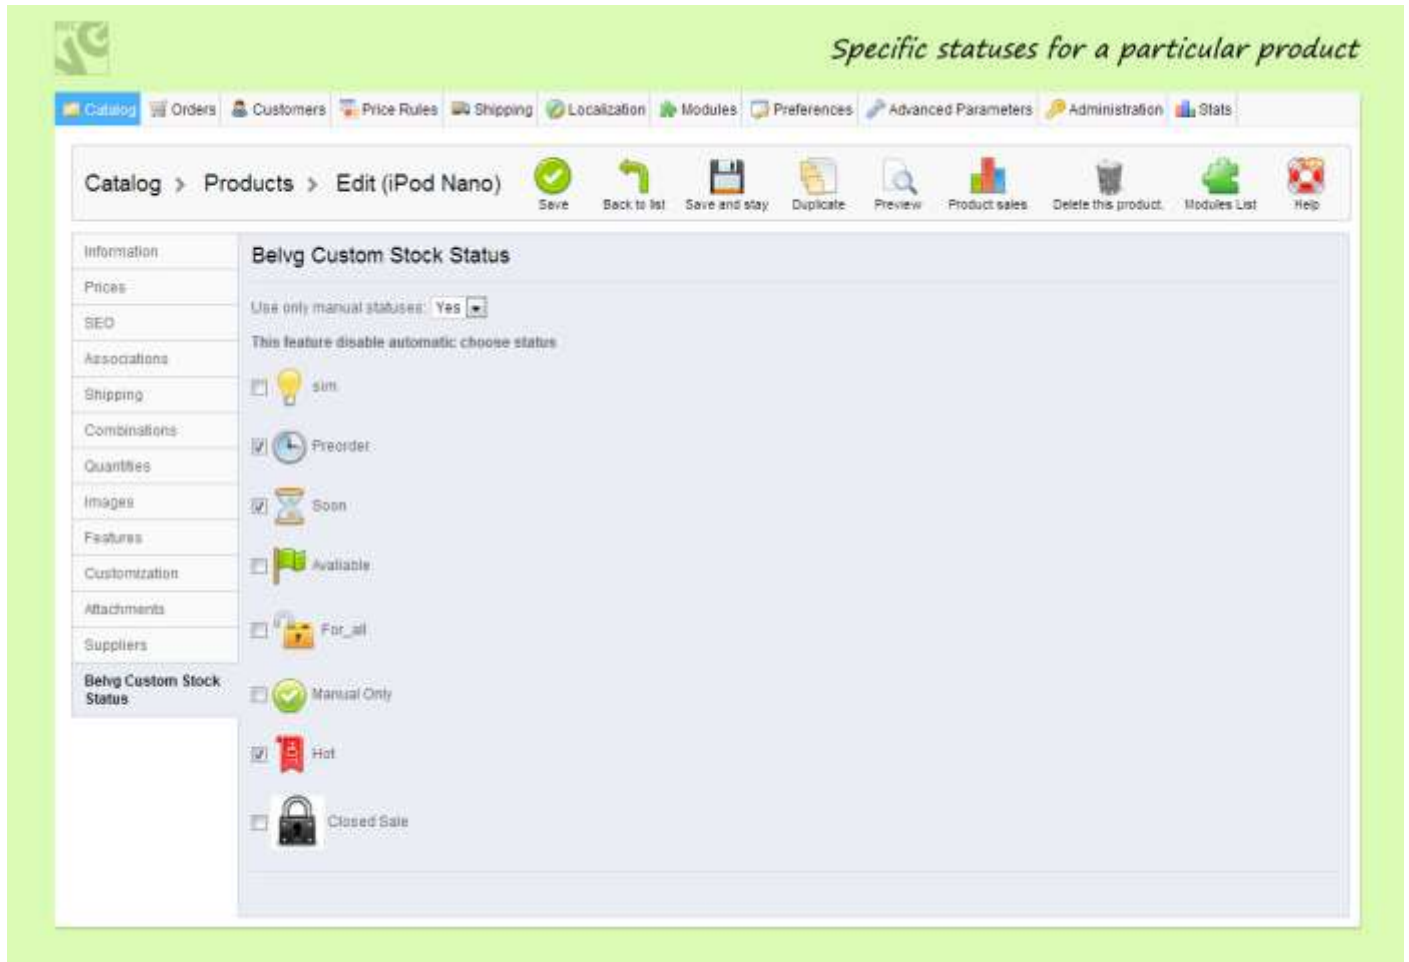

\* Required field

Once the settings are ready click **Save** and you will see that the new status will be added to the list of available statuses in your admin panel.

## How to assign specific statuses for a particular product only?

The settings described above are applied globally, to all your products. However, if you wish to assign some specific statuses for one product only, you need to follow these steps:

Go to **Catalog -> Products** -> click the necessary product and go to the **Custom Stock Status** tab.

In this section you need to select **Yes** under the **Use only manual statuses** dropdown and then select those statuses you wish to be displayed for that product only.

In case you choose **No** – apart from the statuses you select in this section the module will also show up statuses which are applied under the global settings.

## 4. How to use

So, not let's see how these statuses look online, after you created and activated them in your admin panel.

As soon as the remaining product quantity enters the quantity range, specified in the status settings, the module will start showing that status for the product on the product page.

The screenshot shows a product page for an iPod Nano. The page layout includes a header with the logo 'YourLogoHere', a search bar, and navigation links. The main content area displays the product image, a description, and options for disk space (16GB) and color. A price tag shows a discount from \$166.09 to \$158.07. On the right, there are sections for 'SPECIALS', 'OUR STORE(S)', and 'CONTACT US'. At the bottom of the product page, a hand-drawn box highlights a 'Statuses' section with three entries: 'We deliver this item after 29.05.2013', 'Available soon...', and 'Hot sellers'. A handwritten note with an arrow points to this box, stating 'Statuses are shown on the product page'.

Each status will bear the icon and description which have been set in the module settings for that status.

The number of statuses which can appear on the page is unlimited, so you are free to create as many as you want.
