1. Introduction

This manual is a supplementary guide for users, who have registered as vendors to sell goods on Prestashop web-stores that use the **DropShip** module as the main source of administration for registered vendors.

The main aim of this guide is to provide basic instructions and describe the main steps which should be taken to create your first products and start promoting them on the store where you are registered as a vendor.

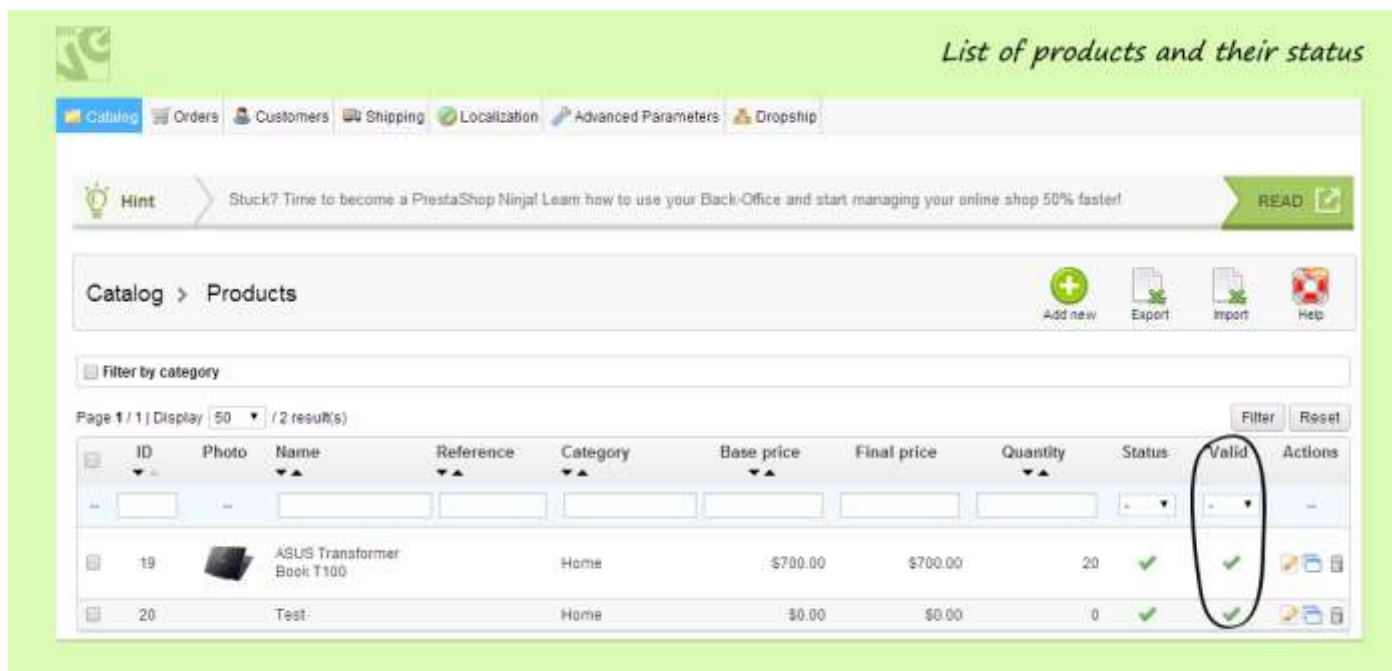

For more explanations and detailed instructions, please, refer to the [Prestashop official guide](#).

2. Creating a New Product

Once you become an approved and registered vendor on a Prestashop store, you will receive login details to access your personal account in the administration panel where you can create and manage the products that you are going to sell as well as configure other settings such as orders, shipping settings etc.

To first thing you need to do to start selling goods in the store is to create a product.

Go to the **Catalogs – Products** section. This section contains the list of all your products which you currently sell on the store. When you create a new product it should be first approved by the shop-admin, only after that the product will become available online for purchase. Trusted vendors have their products approved automatically.

List of products and their status

Navigation: Catalog, Orders, Customers, Shipping, Localization, Advanced Parameters, Dropship

Hint: Stuck? Time to become a PrestaShop Ninja! Learn how to use your Back-Office and start managing your online shop 50% faster! [READ](#)

Catalog > Products

Filter by category

Page 1 / 1 | Display 50 / 2 result(s)

ID	Photo	Name	Reference	Category	Base price	Final price	Quantity	Status	Valid	Actions
19		ASUS Transformer Book T100		Home	\$700.00	\$700.00	20	✓	✓	 
20		Test		Home	\$0.00	\$0.00	0	✓	✓	 

The status of each product is reflected in the **Valid** column. If a product is valid this means that it has been approved by the administrator and thus can be sold online.

To create a new product click **Add New**. You will become redirected to the **Product Edit Page** where you will need to fill in the necessary fields.

The Page contains the following tabs:

Information tab

The first thing you should do is to give name for your product, indicate its type and status.

Naming the product

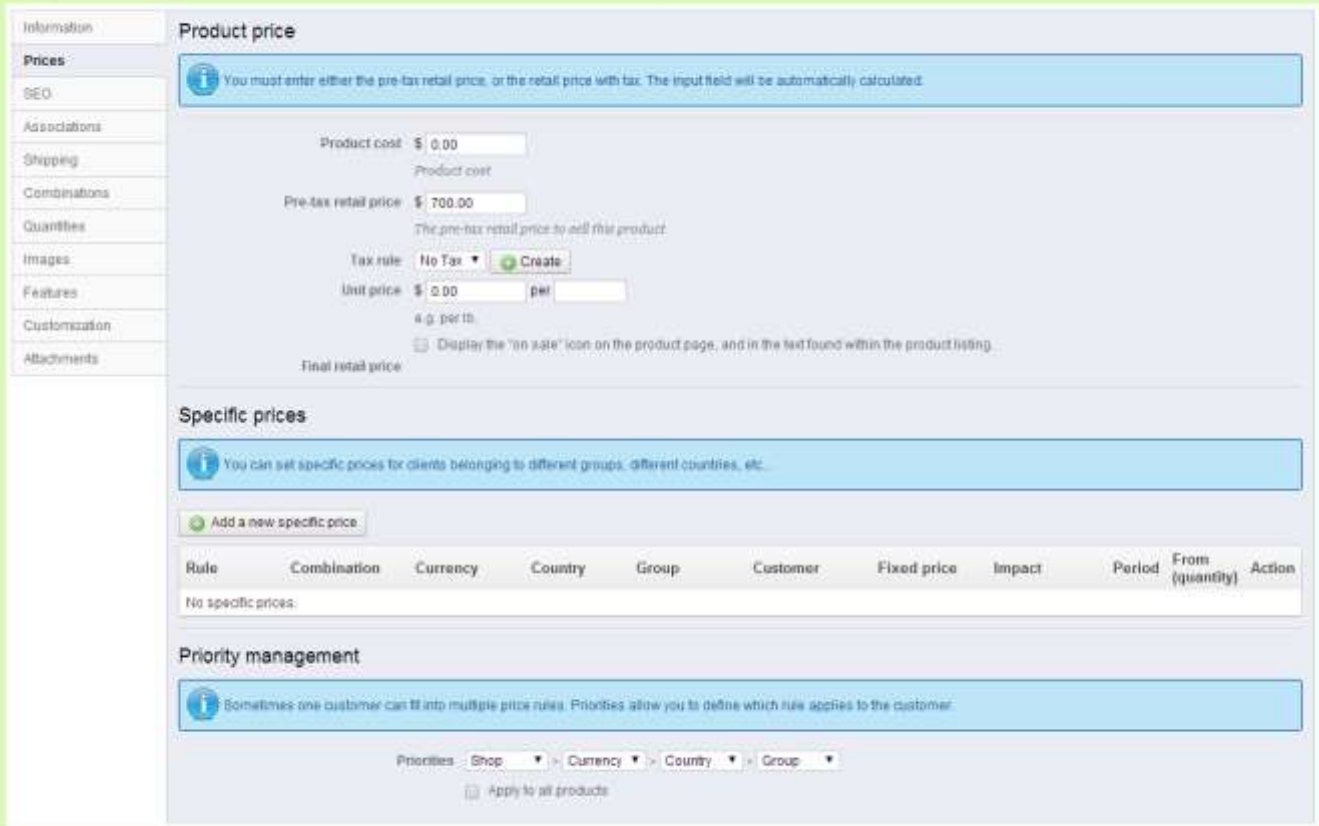

Next, write description for your product. The short description will be used for this product when it is listed with other products, while detailed description will appear directly on the product page.

Giving description for the product

Price tab

On this tab you need to indicate the price for your product.

Indicating the product price

SEO tab

The next tab which you will need to visit is the SEO tab. Although this is not an obligatory option to fill in this section from the functional point of view, however this section is a must if you care about how well your page is doing on search engine results.

- **Meta title** – the title of the product page;
- **Meta description** – short description for your page. This information is used by search engines as a description for your page when it is listed on the results page;
- **Meta Keywords** – enter a set of keywords which characterize your page and your product;
- **Friendly URL** - you can indicate your own URL for the page, which will be easy to remember or readable for search engines.

Associations

Associated categories: | | | |

- ☒ Home
- ☐ iPods
- ☐ Accessories
- ☒ Laptops

Default category:

 The default category is the category displayed by default.

Accessories: *Begin typing the first letters of the product name, then select the product from the drop-down list.*
(Do not forget to save the product afterward.)

Manufacturer:

Select the categories to which your product will belong

Shipping tab

Here you need to specify the dimensions and weigh of your product – these numbers will be used by the store when calculating the shipping price.

Shipping settings

Shipping

Width (package): in

Height (package): in

Depth (package): in

Weight (package): lb

Additional shipping cost (per quantity):
A carrier tax will be applied.

Enter your product dimensions

Combinations tab

The same product may be sold in different colors, sizes, dimensions and other parameters. Quite often a product may include a combination of these attributes. Therefore, this section allows you to create or add new attributes for your product.

To create a combination of attributes for the product click the **New Combination** button on the right upper corner. This will launch the window where you can create and add a combination of attributes for your product.

Available quantities for sale

This interface allows you to manage available quantities for sale for products. It also allows you to manage product combinations in the current shop.

You can choose whether or not to use the advanced stock management system for this product.

You can manually specify the quantities for the product/each product combination, or you can choose to automatically determine these quantities based on your stock (if advanced stock management is activated).

In this case, quantities correspond to the real-stock quantities in the warehouses connected with the current shop, or current group of shops.

For packs, if it has products that use advanced stock management, you have to specify a common warehouse for these products in the pack.

Also, please note that when a product has combinations, its default combination will be used in stock movements.

☐ I want to use the advanced stock management system for this product. - This requires you to enable advanced stock management.

☐ Available quantities for current product and its combinations are based on warehouse stock. - This requires you to enable advanced stock management globally or for this product.

☒ I want to specify available quantities manually

Quantity	Designation

Select values for your features

Customization tab

This section lets you add special **Upload** buttons and additional text fields to the order page. Your customers will be able to add either some text or upload certain files where they can describe certain options or suggestions concerning the order or purchased product. For example, you sell clothes and offer customers to print images or text on t-shirts, so a customer is able to upload the image or enter the text he would like to print on the T-shirt.

Customization settings

Add or modify customizable properties.

File fields Number of upload file fields displayed

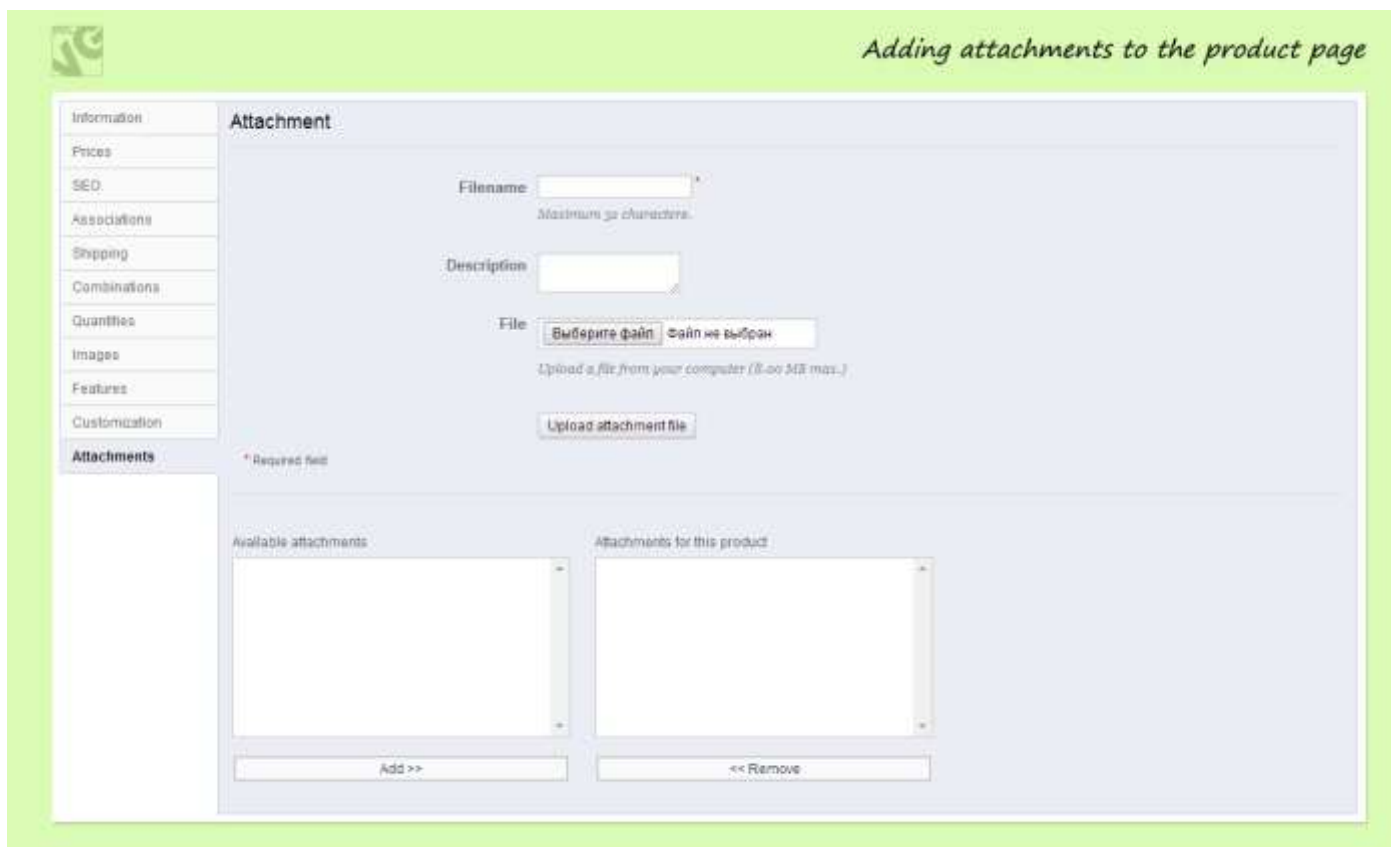

Text fields Number of text fields displayed

Number of Upload buttons on the order page

Number of additional text fields on the order page

Attachments tab

In Prestashop you can make some files available for customers to download before they purchase the product. It can be either a text or Excel file with the detailed characteristics of the product or a manual which you want users to read before they make the purchase.

Adding attachments to the product page

The interface shows a sidebar with tabs: Information, Prices, SEO, Associations, Shipping, Combinations, Quantities, Images, Features, Customization, and **Attachments**. The main area is titled 'Attachment' and contains the following fields:

- Filename:** A text input field with a note 'Maximum 30 characters'.
- Description:** A text input field.
- File:** A button labeled 'Выберите файл' (Select file) and a button labeled 'Файл не выбран' (File not selected).
- Upload a file from your computer (8.00 MB max.):** A note below the file selection buttons.
- Upload attachment file:** A button to upload the file.

Below these fields, there are two lists:

- Available attachments:** A list box with an 'Add >>' button below it.
- Attachments for this product:** A list box with a '<< Remove' button below it.

Once you are finished with all these sections your first product will be ready to launch for selling online. You can easily switch the product on/off by using the **Status** column.

Enabling/disabling the product

Use the Status column to switch the product on/off

3. Creating Shipping Rules

Before you start selling goods it is necessary to add your carriers (services which will deliver products to your customers) and assign shipping rules which will be applied to the items you offer.

To create shipping rules go to the **Shipping – Shipping** section.

Shipping parameters

Catalog Orders Customers **Shipping** Localization Advanced Parameters Dropship

6. Optional Sections

All sections which were described above are obligatory to know for proper management of your products. However, there are several more sections which are not obligatory to use, although they can facilitate your store management and improve shopping experience for your customers.

Customer Service

This feature allows you provide customer care option. All customer requests and messages will be listed under this section so you will be able to promptly manage all the requests.

The screenshot shows the 'Customer service section' interface. It features a breadcrumb trail 'Customers > Customer Service' and a 'Help' icon. The interface is divided into several panels:

- Webmaster:** Contains the text 'If a technical problem occurs on this website' and 'No new messages'.
- Customer service:** Contains the text 'For any question about a product, an order' and 'No new messages'.
- Meaning of status:** A legend showing status icons: Open (green circle), Closed (red circle), Pending 1 (orange circle), and Pending 2 (orange circle).
- Customer service : Statistics:** A table showing various statistics, all with a value of 0:

Customer service : Statistics	
Total threads	0
Threads pending	0
Total number of customer messages	0
Total number of employee messages	0
Unread threads	0
Closed threads	0

At the bottom, there is a pagination bar showing 'Page 1 / 1 | Display: 50 / 0 results' and 'Filter' and 'Reset' buttons. Below this is a table with columns: ID, Customer, Email, Type, Language, Status, Employee, Messages, Last message, Is admin, and Actions. The table currently displays 'No items found'.

Advanced Parameters

By default the **Advanced Parameters** section includes only the **CSV import** option. This option lets you import a list of products from a CSV file, which is a great time saving feature because you do not need to create each product individually but import a whole list of products from a single file.

CSV import section
