1. Introduction to Product Hover

Prestashop Product Hover is a small and powerful extension that provides your customers with additional information about products without entering the product page.

The module works as a simple pop-up that appears when a customer hovers a mouse point over products on a catalog page. The pop-up window may contain such useful details as: available product colors, sizes, stock availability. This saves customers' time and improves user-friendliness and usability of your store.

Key features:

- Simple installation, no programming skills required;
- The module does not require any additional configurations;
- Select the information you want to display on the pop-up just with a mouse click;
- The pop-up may take either a fixed position or move along with the mouse point over the product icon.

2. How to Install and Deactivate

How to Install

1. Set 777 or 0777 on the folders: '/modules/'

Important! Change all permissions back after installation.

2. Go to Modules -> Modules -> Add a module from my computer -> choose the file (.zip) -> upload this module. Choose module in section Front Office Features and install it.

3. Go to Advanced Parameters -> Performance -> click the Clear Smarty Cache button

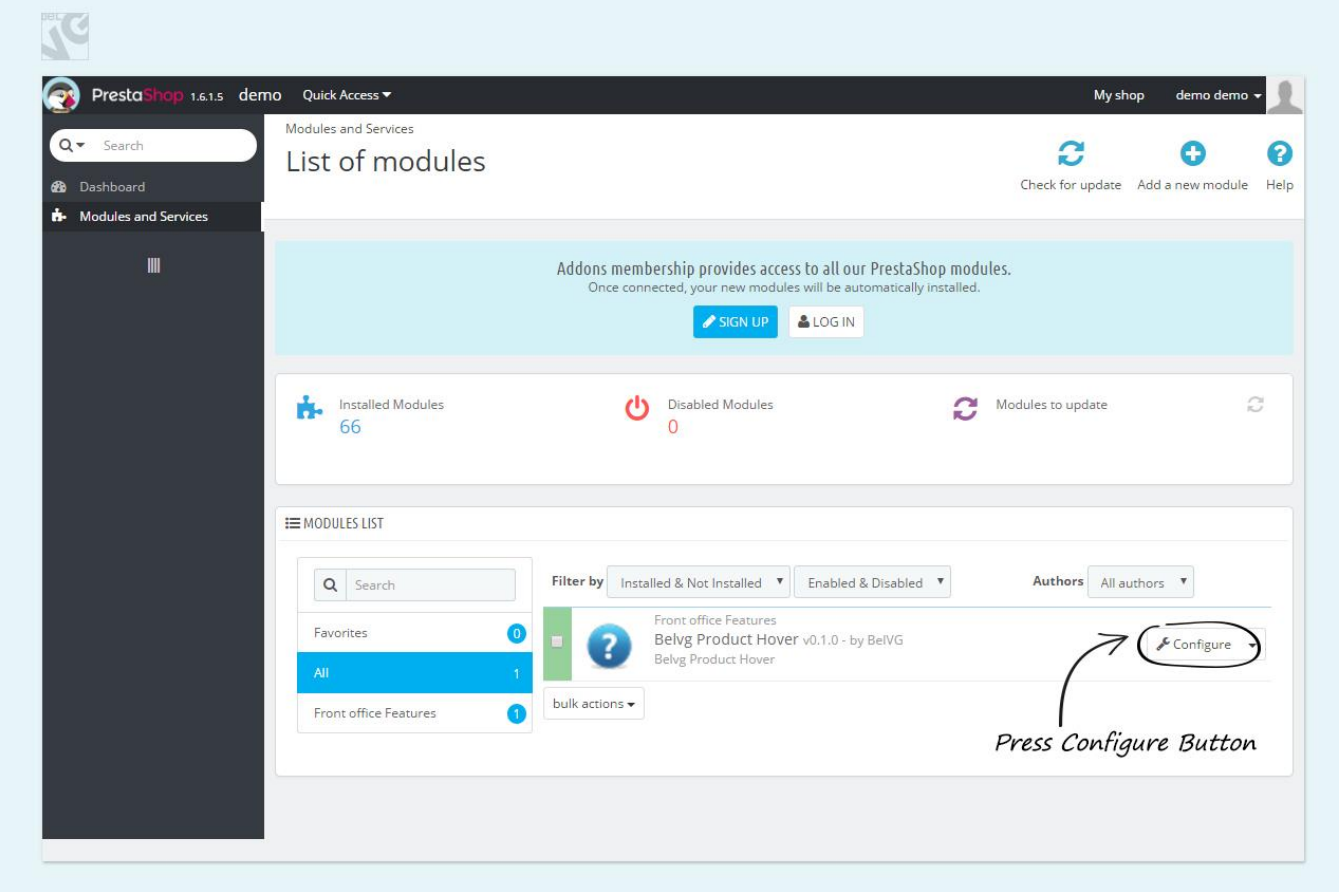
How to Deactivate

Click the button Disable in Modules -> Front Office Features.

To remove the extension form the server, press Delete in Modules -> Front Office Features.

3. How to Configure

Log into your Prestashop admin panel and switch to **Modules and Services** - **BelVG Product Hover** - click **Configure**.

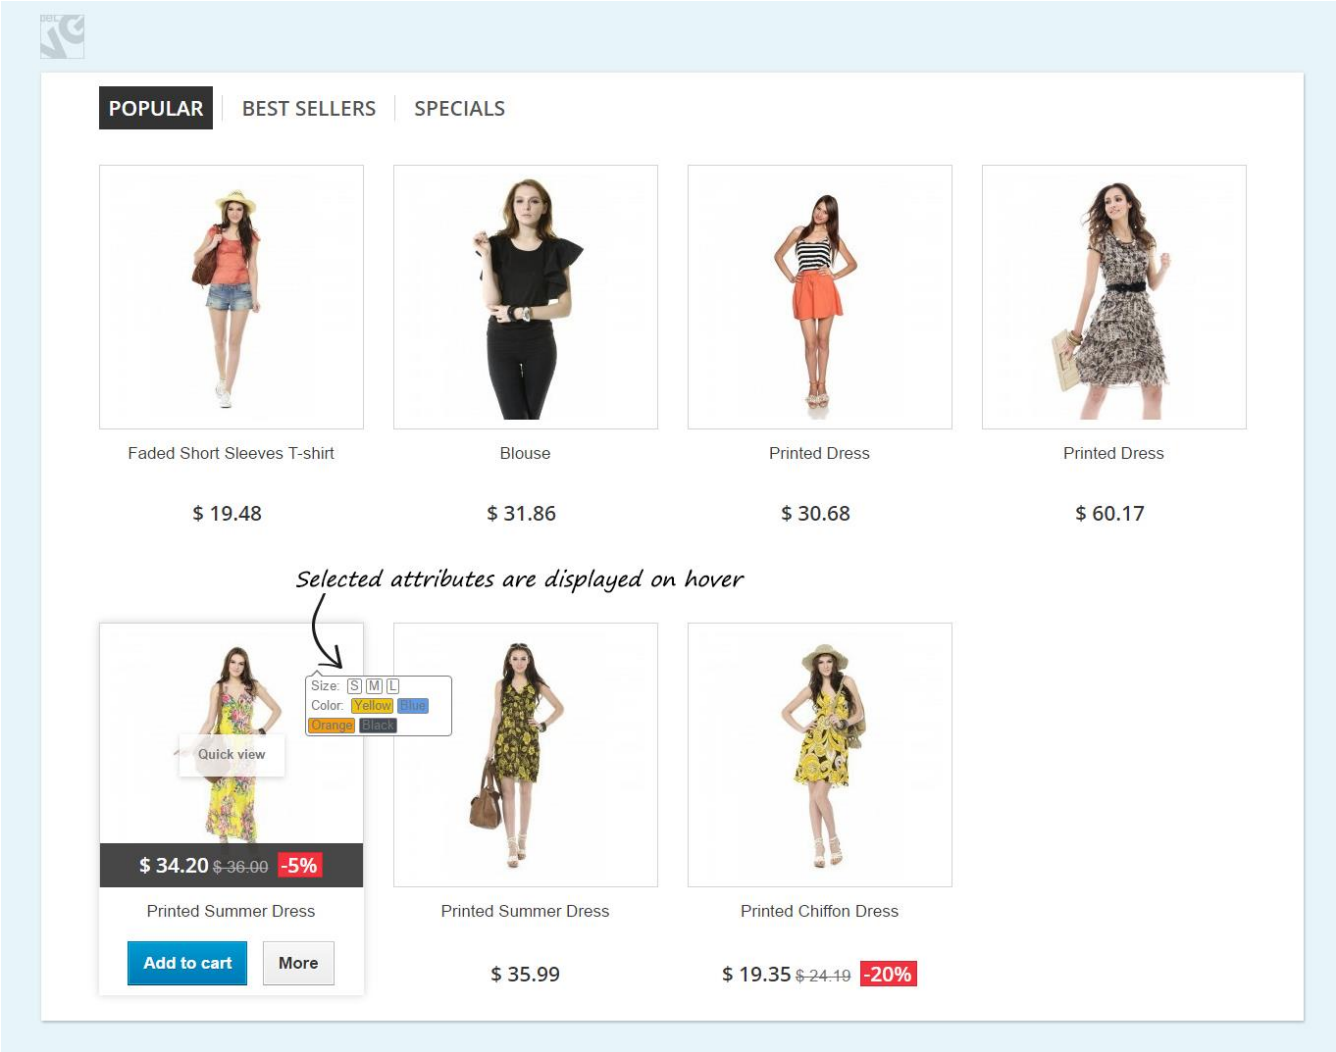


Select the items you wish to display on the pop-up window for every product in your store:

- **Color** - available product colors;
- **Shoes size** - available sizes for shoes;
- **Sizes** - sizes for other products;
- **Check Stock** - display the status of the product (either in stock or not);
- **Static Positions** - this option will make the pop-up window take a fixed static position on the product icon. If you disable this option the pop-up will move over the product together with the mouse point.

That is all - no other settings need your attention!

And this is how the pop-up will look on the front-end.



Do you have questions about extension configurations?

Contact us and we will help you in a moment.
